

AMENDMENT AND RESPONSE TO OFFICE ACTION
U.S. Serial No. 10/607,010

AMENDMENTS TO THE SPECIFICATION

Please amend the specification by inserting the replacement paragraph below at the first full paragraph on page 22.

First jaw 346 includes a stepped hole 362 that retains a biasing element, such as a spring 364, and locator pin 360, and stop 365. When shaft 320 of second member 310 is fully inserted within hole 350 of pin clamp 340, circumferential groove 322 receives locator pin 360, engaging second member 310 and first jaw 346 of pin clamp 340 while still allowing rotation of pin clamp 340 about shaft 320. To release engagement between second member 310 and pin clamp 340, locator pin 360 is pulled and shaft 320 of second member 310 may easily be removed from hole 350 of first jaw 346.
